

An expanded emergency department with a narrowed focus. You.

When we doubled the size of Maine's leading emergency department and only ACS Level 1 verified trauma center,* we knew we had to maintain our high standards of personable quality care for our patients. On average, our professional and committed staff sees a new patient every 9 minutes, treating any medical emergency – there's even a dedicated pediatric space. It takes an entire hospital to make an emergency department shine, that's why Maine Medical Center has more specialists than any other hospital in the state. Just last year, we made a difference for 60,000 emergency patients. But we're not about numbers; we're about saving lives.
